

# ORAL HEALTH IN COMPREHENSIVE CLEFT CARE

## Lift the lip and look inside once a month

Wash your hands, or wear disposable gloves.

Position the child's head on your lap, sit facing each other, or lie the child down on a couch or bed.

**Lift the lip and look at the child's teeth and gums. What do you see?**

### What should your child's teeth look like?

- Clean
- Unbroken surfaces
- Gums should be firm to the touch, not red and not tender or swollen

### If your child has tooth decay you might notice:

#### 1) White spots or white lines on the tooth.

This is early decay and you need to see an oral health professional.

#### 2) Brown spots or cavities.

This is decay and you need to see an oral health professional urgently.

#### 3) Advanced decay or broken teeth.

This is severe decay and may cause your child pain. You should urgently see an oral health professional.

## What else might you see if your child has oral health problems?

- Colour changes to the tooth surface, like white or brown spots
- Cavities
- Broken teeth
- Swollen or bleeding gums
- Abnormal tooth shape or surface
- Dental plaque
- Abnormal movement of the lip (scar)

## How can you prevent oral diseases?

- Lift the lip monthly to check for early signs of tooth decay.
- Brush twice daily, for 2 minutes with fluoride toothpaste from the eruption of the first tooth, and spit out the toothpaste but do not rinse away the residue.
- Wipe the baby's mouth after each feed and before bed
- Make healthy food and drink choices, without added sugar.
- Don't put sweeteners (honey, sugar, fruit juices) in the child's bottle or sippy cup
- Choose fluoridated tap water to prepare foods and as the preferred drink.
- **Visit your oral health professional regularly and before the child's first birthday.**
